0.5.4

How to read these results

These are estimates, not a compliance, accessibility, or clearance determination. NOFO Builder measures its own drafts from structured HTML; this report measures text extracted from a PDF. Scores can differ even for the same document.

Measurement scope

2 of 2 pages processed.

Text was reconstructed from page layout because usable PDF tags were unavailable.

2 of 2 pages contain extractable text

Word count includes all text recovered from the PDF: 11 words. Sentence-based formulas use 11 words in 2 complete sentences. The remaining 0 words (0.0%) are in text that does not form complete sentences, such as some headings, labels, list items, table cells, and other fragments, so sentence-based scores exclude them.

Reliability of these estimates: Low

PDF tags were unavailable, so the text order was inferred from page layout. Treat every value as a low-reliability estimate.

Readability measures

Word count

11

Estimated number of words recovered from the PDF.

Estimated · Low reliability

Words per sentence

5.5

Average length of measured sentences.

Estimated · Low reliability

Sentences per paragraph

2.0

Average length of reconstructed paragraphs, where available.

Estimated · Low reliability

Flesch–Kincaid Grade Level

6.9

An approximate U.S. school grade level for the measured text.

Estimated · Low reliability

Passive sentences

0.0%

Estimated share of measured sentences identified as passive.

Estimated · Low reliability

Calculation notes (1)

- This PDF has no usable text tags. Results are low-reliability estimates based on page layout.

Your PDF was processed temporarily on HHS-operated systems to calculate these estimates. It was not added to NOFO Builder, and no report history is retained. Save or copy your results before leaving this page; they cannot be recovered later.
